

Shadow Hills Industries
Mastering Compressor Class A Special Edition

For authorized personnel only:

Shadow Hills Industries is proud to announce the release of the Class A Special Edition Mastering Compressor.

Towering at five rack spaces of tactile significance, there is beyond the surface of the glowing green magic eye and polished Bakelite, a euphonic stratagem devised to deliver inspiration. By utilizing tandem serial compression, the Shadow Hills transformer matrix, and the precise thoughtful controls, the Mastering Compressor can apply compression and limiting to a degree that is tasteful and refined or brutal and unrelenting.

Once more, Shadow Hills re-imagines the state of the art. The Class A Special Edition Mastering Compressor is outwardly distinguished by the red lights illuminating its surface, and inwardly by its fully Class A compression cells. The Special Edition features the custom Class A discrete voltage controlled amplifier. The sound of this component of the discrete cell is outstanding, adding even-order harmonic warmth, headroom for days and a character that can only be described as "finished." This variant extends even further the threshold of expectations from this modern classic.
